PROJECTS

Pneumonia Detection using CNN model

- It is a Machine Learning project that detects pneumonia using a Convolutional neural networks (CNN) model. .
- Training and Testing of the model using a dataset of X-Ray images of patients suffering from pneumonia. .
- Detected Pneumonia from Chest X-Ray images using Custom Deep Convololutional Neural Network and by retraining pretrained model "InceptionV3" with 5856 images of X-ray . For retraining removed output layers, freed first few layers and fine-tuned model for two new label classes.

Realtime Object Detection using Yolo

- The main goal of object detection is to develop and implement methodology for automatic detection and marking of the objects in a video.
- Enhanced it by adding a Search button for any object in the picture with a bounding boxes . Improved the detection time of the image. .
- The YOLO object detector divides an input image into an SxS grid where each cell in the grid predicts only a single object. If there exist multiple, small objects in a single cell then YOLO will be unable to detect them, ultimately leading to missed object detections.

YouTube Data Analysis For Ad Campaign

- Took YouTube Trending Dataset to build Data Lake using Amazon S3, wrote ETL job using Spark and SQL queries to analyse data from Amazon Athena.
- Built dashboard to understand how to categorise video based on their comments, factors affecting the popularity of a YouTube video

CERTIFICATION

- Data Analytics by IIT Roorkee(NPTEL).
- Entrepreneurship by IIT Madras(NPTEL).
- SQL(Intermediate) Certified by HackerRank.

EXTRACURRICULAR ACTIVITIES

- **Event Coordinator** in Collage Badminton Club - 2021 - 2022
