EDUCATION

•PSG College of Technology, Coimbatore

Bachelor of Engineering (BE) in Computer Science and Engineering

2020-24

CGPA: 8.22

•International School of Kenya, Nairobi - High School

International Baccalaureate Diploma (IBDP)

2020

IB Points: 33/45

PROJECTS

• Brain-Computer Interfacing Model

January - June 2023

ML-based project focused on Brain-Computer Interfacing (BCI) to covert EEG signals into words

- Developed a BCI system to facilitate the conversion of EEG signals into words, enhancing communication between healthcare professionals and patients
- Leveraged supervised and unsupervised learning techniques for accurate EEG pattern recognition.
- Achieved notable inter-class accuracy of 46.10% through rigorous experimentation and analysis.
- Presented at the 2023 IEEE 7th International Conference on Computer Applications at IIT Roorkee.

•Detecting Fraudulent Patterns in Vast Financial Information Graphs

August 2023 - Present

Project to identify suspicious loan applications on a real world dataset.

- Applied Graph Neural Networks (GNNs) to analyze a real-world dynamic finance graph with over 3M nodes and 4M dynamic edges.
- Successfully identified suspicious loan applications by designing, training, and fine-tuning GNN models.
- Attained notable results, achieving 70% accuracy using Multi-Layer Perceptron (MLP) and 73% with Graph Convolutional Networks (GCN).
- Currently working to further increase accuracy using advanced GNN methods

• Stock Prediction Web App

September - November 2022

Python-based app using Streamlit for stock value prediction and sentiment analysis.

- Leveraged Meta's Prophet Library, and NLTK Vader Lexicon for stock value prediction and sentiment analysis.
- Integrated XML news feeds for real-time stock headlines analysis.
- Enabled users to predict specific stock values accurately and assess sentiment in headlines.
- Collaborated with a multidisciplinary team for seamless user interface.

•Project Repository Management App

May 2022 – August 2022

CRUD website for project requests and submission to professors

- Developed a professional CRUD website empowering students to submit project requests to professors for approval and providing a seamless feature for uploading project files for future reference.
- Leveraged React.js for the dynamic front-end, Node.js for the robust back-end, and utilized MySQL database for efficient data management.
- Demonstrated strong proficiency in full-stack development with user-friendly interfaces and secure data handling.

EXPERIENCE

• Assistant

March – April 2018

TechnoBrain Group

Nairobi, Kenya

- Learned to work with relational databases and SQL.
- Conducted marketing research to accurately identify industry trends and business opportunities.
- Gaining knowledge of company policies, protocols, and programming methods

TECHNICAL SKILLS AND INTERESTS

Languages: Python, C, Javascript, Java

Libraries :MNE,NumPy, Pandas, Basic Python Libraries, ReactJs

Tools: Pycharm , VScode, Matlab, Git, Github

Frameworks: TensorFlow, Keras, Scikit-learn, NodeJs

Cloud/Databases: Streamlit, MongoDB, Relational Database(MySQL)

Relevant Coursework: Machine Learning, Big Data Analysis, Computer Vision, Data Science, Embedded Systems, Data Structures & Algorithms, Operating Systems, Database Management Systems

Areas of Interest: Machine Learning, Data Science, Data Analysis, Biomedical Signal Processing

Soft Skills: Problem Solving, Critical Thinking, Researching, Self-learning, Presentation, International Adaptability

CERTIFICATIONS

•Career Essentials in Data Analysis - Microsoft

December 2022 – January 2023

•Python Data Analysis - LinkedIn

December 2022 – January 2023

•Machine Learning with Python - Free Code Camp

May 2023 – July 2023
