TECHNICAL SKILLS

- Skilled in Java, TypeScript, JavaScript, Python, GoLang, and C++, focused on creating user-friendly and high-performance software.
- Experienced with Node.js, GraphQL, React.js, Flutter, and Kafka, enabling robust application development across platforms.
- Proficient in DevOps with extensive knowledge of AWS and GCP for effective application deployment and management.
- Expert in database technologies including PostgreSQL, MySQL, and AWS DynamoDB for optimized data storage.

WORK EXPERIENCE

Pinky Promise, Mumbai, India

Full Stack Software Engineer

Oct 2023 - Present

- Built a completely new version of the app for connecting women with Gynecologists in a conversational chatbot style using tools like Dialogflow, sockets, graphql and a set of microservices on the backend using NodeJS, Typescript and GCP.
- Handled complex scenarios to ensure the conversation between the patient and doctor continues after the session time limit of 30 minutes and inactivity.
- Decreased the number of incomplete conversations down by 80% leading to an overall 2x increase in revenue and significant reduction in operational time to handle the bookings manually.
- Handled UI bug fixes for the flutter app, across various versions of the app in ios, android and web app.

Justworks Labs, Cincinnati, OH

Backend Development Engineer

Feb 2023 - Oct 2023

- Worked in a startup environment to deliver new features for the payroll service using GoLang and Kafka to interact with the different micro services.
- Worked on stand-alone features like Quickbooks integration with the payroll service, sso login with Okta, enabling member start date update, allowing multiple payment basis for each employee over a period and resetting bank account.
- Implemented features that focused on increasing the flexibility for the end users to use our platform leading to significant growth in the number of businesses the product could cater to.

Amazon Web Services, Seattle, WA

Software Development Engineer

July 2021 - Jan 2023

- Collaborated with a team of six engineers to deliver new features and functionalities to automate the existing manual cumbersome process of managing EC2 instance prices performed by the pricing managers.
- Model version and archival mechanism for old pricing publications tagged with non-compatible model versions using Java as the backend programming language and Python for the scripts.
- Managed addition of AWS Outpost prices to the pricing console increasing the usability of the console for multiple use cases along with redesigning of the architecture to prioritize our public pricing offers.

EDUCATION

University of Southern California, Los Angeles, CA

May 2021

Viterbi School of Engineering Master of Science, Computer Science with GPA: **3.714 / 4.0**

University of Mumbai, Mumbai, India

May 2019

Bachelor of Engineering in Computer Science with CGPA: **9.24 / 10**

PROJECTS

BeSexEd (Winner of AthenaHacks 2020, <https://devpost.com/software/be-sexed-kgq5b2>)

An interactive web application designed to make sex education fun and accessible, featuring quizzes and conversations.

GoCoach (<https://devpost.com/software/gocoach>)

A digital tool for fitness coaches to create and manage dynamic classes through a React-driven interface. Features preset and custom modes for structured workouts and flexible interval training.

Harexi (<https://devpost.com/software/harexi>)

A platform-agnostic app developed with React Native and Firebase, designed to help users make healthier food choices. Implemented several features in the app where users could review and bookmark their favorite products.
