WORK EXPERIENCE

Approaching 3 years of working experience in software engineering

Software Engineer, Tejas Networks

Oct 2021 – Present

- Part of the software product development team for DWDM Network Planning Tool, with a focus on full-stack development.
 - Developed frontend and backend features to simulate network designs.
- Optimized the existing code base, reducing script run time by 60% from an average of 10 minutes to 4 minutes per simulation.
- Contributed to the conceptualization, design, and development of a sophisticated feature tracking web application.
 - Feature tracking app utilized by 4 teams to monitor feature compliance, enhancing accountability, and ensuring adherence to project requirements.
 - Reducing feature tracking time by 70%.
- Implemented HTTP Restful Web Services and APIs as part of the backend development process, ensuring seamless communication between client-side and server-side components.
- Tech stack – Python, Django, PostgreSQL, REST APIs and JavaScript.

Frontend Developer, Publicis Sapient

Jun 2021 – Oct 2021

- Played a role of software engineer in the development of dashboards for a Fintech web application in a collaborative team environment.
- Employed JavaScript, React and CSS to build robust frontend components.
- Created a seamless user experience with visually appealing and responsive user interface design.
- Surpassing project milestones by 10% ahead of schedule, ensuring a smooth workflow.
- Tech stack – JavaScript, React, CSS, HTML, Bootstrap, dev-ops – CI/CD, Jenkins, REST APIs, Java, Spring Boot

Engineering Intern, Publicis Sapient

Jan 2021 – Jun 2021

- Significantly contributed ~30%, to build UI modules for E-Commerce Android application.
- Actively participated in creating a web application for Inventory Management.
- Tech stack – JavaScript, React, Redux, React Native, Node JS, REST APIs, CSS, HTML, and Bootstrap.

TECHNICAL SKILLS

- **Programming languages** – Python, JavaScript, C, HTML, CSS
- **Frontend Frameworks/Libraries** – ReactJS, Redux, React Native, Bootstrap
- **Backend Technologies/Databases** – Django, PostgreSQL, Node JS
- **Version Control** – Git

EDUCATION

B. Tech, PES University

Aug 2017 – Jul 2021

- Bachelor's degree in Electronics and Communication Engineering (ECE)
- Minors in Computer Science Engineering (CSE)
- CGPA: 9.05 and recipient of Prof. CNR Rao Merit Scholarship – awarded to top 20% performers in B. Tech

PROJECTS

ITU AI/ML In 5G Challenge

Jun 2020 – Oct 2020

- Predict the performance of IEEE 802.11 WLANs using ML.
- Designed an ML model to predict WLAN throughput in dense deployments.
- Utilized data from dense deployments stimulated using Komondor.
- The model underwent thorough evaluation using a suite of performance metrics, including Mean Absolute Error (MAE) and Root Mean Square Error (RMSE).
- Honoured with Encouragement Award from ITU.
- Tech stack – Python, Pandas, Numpy

Shruti Detection Using ML and Sargam Identification of Instrumental Audio

Jan 2020 – May 2020

- Crafted a machine learning model with an accuracy of 90% to classify audio tone (Shruti) and identify Sargam.
- Presented research at the 25th International Symposium FRSM Conference held at NIT Silchar.
