Class 10th, D.A.V. PUBLIC SCHOOL	04/2012 – 05/2013 Berhampur, India

Projects

WordPress Website, Using AWS Services

A Project in which we have been using Multiple AWS Services such as

- Creating an IAM User and giving Appropriate Roles to the User
- Creating an Public EC2 Instance using appropriate permissions in Security Groups and install Appropriate Packages like apache and MySQL
- Creating a Target Group and an Application Load Balancer to balance the Traffic coming into the Instance.
- Creating an RDS Cluster to save the Data which is submitted by the USER.
- Finally creating a Hosted Zone in Route53 and mapping the Load Balancer EndPoint by Creating a Record and test the output.

Video Transfer, Using AWS Services

A project in which we need to create a Web Server, Install necessary packages and launch a server and make it ready in such format that it can access any media from an S3 Bucket and deliver it to the end user.

Movie Website, Using AWS Services

A Final Capstone Project in which Nearly all AWS Services like VPC, IAM, EC2 Instance, Load Balancer, target Group, Launch Template, Golden AMI, Auto Scaling Groups, EFS, Route53, EventBridge, SNS Topic and RDS Cluster through which we delivered a Website through which a Customer can Access Videos from S3 Bucket and Run it through the Domain in Route53.
