EXPERIENCE

[LatitudePay](#), Remote, India

JANUARY 2023 – PRESENT — Software Development Engineer (Django|Postgres|Docker|GoogleCloud|Metabase)

- Refined the app, minimizing rejection points, leading to a 30% reduction in customer drop-off rates.
- Reduced latency by optimizing SQL queries in **Django ORM**, resulting in a decrease from an average of ~100 ms to ~75 ms.
- Design and work on development of qr code **microservice** for payments through our app using **firebase dynamic links**.
- Proposed and developed a reauthentication feature that reduced fraudulent transactions by 50% when detecting a device change during login attempts.
- Introduced and developed 15 widgets on the internal portal to automate various manual processes, resulting in a 40% reduction in time spent on repetitive tasks.
- Enhanced product quality by taking down sentry issues from 500 to 10, conducting root cause analysis and fixing issues.
- Improved the **unit testing** framework, reduced the time taken for running test cases by 4x.

[Adcuratio](#), Bangalore, India

APRIL 2022 – DECEMBER 2022 — Software Developer II (Django|Kubernetes|AWS|ReactJS|MongoDB|Cassandra|SQL)

- Implemented a robust **CI/CD** pipeline via **GitHub Actions** to achieve 30% faster build, testing, and deployment cycles for backend applications in the ad server application.
- Supervised a small team of three junior developers, providing mentorship and guidance to enhance their skills and productivity.
- Successfully addressed bugs and introduced feature enhancements, resulting in a 20% increase in application effectiveness.
- Developed high-performing RESTful APIs for retrieving **Shopify** inventory data using **GraphQL** queries, reducing data retrieval time by 25%.
- Actively contributed to **database design** and assumed complete responsibility for end-to-end backend development, testing, and deployment of the dashboard application.
- Streamlined legacy services into a middleware, achieving consolidated functionality and database updates through cron jobs, decreasing maintenance efforts by 40%. Individually contributed to the entire development lifecycle.
- Created an architecture and service that seamlessly integrates the Helium API for hotspot earnings data synchronization. Automated database syncing via cron jobs and enhanced security practices led to a 50% reduction in manual intervention. Solely managed development, testing, and deployment.

SEPTEMBER 2021 – MARCH 2022 — Junior Software Developer (FastApi|Flask|Selenium|Docker|ReactJS|AWS|Redis)

- Orchestrated efficient **Kubernetes** cron jobs for engaging **Elasticsearch**, transforming data, and enabling seamless **S3** uploads. Leveraged multithreading, achieving 30% faster processing.
- Established a robust cron job system for real-time email alerts during service disruptions, decreasing downtime by 25%.
- Monitored and optimized the **Redis** database, cutting data retrieval latency by 15% and boosting system responsiveness.
- Introduced comprehensive unit tests, raising test coverage by 40% and reducing post-deployment issues by 50%.
- Automated video watermarking, trimming processing time by 50%, with user-friendly documentation.
- Utilized **Selenium** to scrape 10,000+ products across diverse online shopping categories, enriching datasets.
- Thoroughly **documented** existing services, reducing new developer onboarding time by 20% and enhancing collaboration.

[Redcarpetup](#), Gurugram, India

NOVEMBER 2020 - AUGUST 2021 — Backend Developer (Django|XGBoost|Postgres|Docker|Sagemaker|Apache Spark)

- Develop, test and implement new end to end features, documentation and maintain software.
- Refactoring Legacy Code Base to make it modular, reusable and maintainable .
- Work closely with the data analyst team in building various statistical models to prevent loan default and integrate that within the app flow.

PROJECTS

[Caller-id App](#) | [CI-CD workflow](#) | [Loan Management Api](#) | [Online shopping system](#)

SKILLS & TECHNOLOGIES

Problem Solving
Data structure and algorithms
System Design | Architecture
Machine Learning | Data Science
SQL(PostgreSQL,MySQL)
Nosql(Redis, MongoDB, Cassandra)
Git
RESTful APIs
Microservices
Docker | Kubernetes
AWS(ec2,s3, RDS, sagemaker)
Distributed Systems

PROGRAMMING LANGUAGES

Python
C| C++
Javascript,
Java,
Html| CSS
Php
SQL

ACHIEVEMENTS

Earned a 5 star gold badge for python programming on hackerrank platform.

[Python\(basic\)](#) and [Python\(intermediate\)](#) certificate from hackerrank.

Earned a 5 star silver badge in problem solving on hacker rank platform

[Problem solving \(Basic\)](#) certificate from hackerrank

Udemy certificates :

[SQL using postgres](#)

[Rest api with flask \(python\)](#)

EDUCATION

Bachelors In Technology

Banasthali Vidyapeeth, Rajasthan

- JULY 2016 -2020

XII CBSE

Jindal Public School, New Delhi

- APRIL 2015 -2016 , Science(PCM)

X CBSE

Jindal Public School, New Delhi

- APRIL 2013- 2014

SPOKEN LANGUAGES

English
Hindi
