EDUCATION

- Delhi Technological University** Delhi, India
Bachelor of Technology - Electronics and Communication; CGPA: 8.14 August 2018 - June 2022
Relevant Coursework: Operating Systems, Data Structures, Algorithms, Object Oriented Programming, Databases
- Modern Vidya Niketan Aravali Hills** Faridabad, India
CBSE Class XII; Percentage: 92.2% June 2018

EXPERIENCE

- TATA 1mg** Gurugram, India
Software Developer May 2022 - Present
 - Formulated an in-house PDF generation algorithm using fpdf2 and replaced reliance on external software solutions to generate 40,000+ smart lab reports monthly, saving over INR 2 million annually.
 - Collaborated with doctors to build the architecture of a rule engine for recommending lab tests to users based on their historical lab parameters which increased revenue by 5%.
 - Identified 30+ data corruption issues and rectified them by redesigning pipelines, reducing data corruption by 90%.
 - Engineered faster APIs by reducing latency & optimizing resource utilization, reducing server costs by 40%.
 - Ideated a standardized dashboard on Kloudfuse for monitoring Kubernetes resources which was adopted by more than 5 teams resulting in enhanced visibility of system health, performance & issue identification.
 - Tech Stack:** Python, REST, Sanic, Git, MongoDB, Redis, Bastion
- GE Aviation** Bengaluru, India
Software Engineering Intern June 2021 - August 2021
 - Tested and deployed Python analytics for identification of multiple components of GE90 engine using AWS console.
 - Implemented an impactful data visualization for scrap residual of CF6 engine being utilized by 10+ service centers.
 - Designed and developed a single home page for navigating to 3 repair forecast dashboards
- SmartBridge in collaboration with IBM** Remote
Machine Learning Intern May 2020 - June 2020
 - Built an efficient machine learning model to predict the Life Expectancy of a country with an r2 score of 0.91.
 - Deployed the model using IBM cloud services and Node-RED.

SKILLS SUMMARY

Languages: Python, C++, JavaScript, HTML, CSS

Frameworks: Sanic (async Python web framework), Node.js, Express.js

Developer Tools: Kubernetes, Git, PostgreSQL, MongoDB, AWS, Jira, Kloudfuse, Grafana, Jenkins, Devtron

PROJECTS

- Typing Speed Tester** February 2021
 - Built a web application to test and practice typing speed with 2 customizable difficulty and time [view](#)
 - Achieved 25+ stars and 15+ forks on GitHub repository.
- Passpit** January 2021
 - Created a MERN stack password manager web application for securely storing passwords.
 - Utilized Encryption techniques for hashing passwords 3 times during network transfers for additional protection.
- Freelance Experience** December 2021
 - Developed a secure password generator with 3 formats and 6 options to customize the generated password. [view](#)
 - Created a business loan and profit margin calculator with an amortization schedule using react-chartjs-2. [view](#)
 - Implemented a web application for verifying the SSL certificate of a URL. [view](#)

VOLUNTEER EXPERIENCE

- Design Head at Kalakriti (Creative Art Society of DTU)** August 2019 - March 2020
Organized events, workshops and mentored 40+ students in graphic designing
- Photography Head at Engifest DTU** August 2019 - March 2020
Led a team of 30+ students to expand social outreach of the fest and capture the events.
