SUMMARY

As a Software Engineer at Flipkart Promise Engine, I spearhead the development of high-performance, low-latency systems crucial for delivering comprehensive availability(inventory), serviceability, and Date of Delivery information across multiple facets of the Flipkart platform including Home Page , Search Page , Product Page , Cart Page all other post-order requirements. Proficient in addressing complex Distributed Systems challenges at scale, my passion for intricacies within database design and operation drives my commitment to optimizing system performance and elevating user experience.

Education

IIIT ALLAHABAD

2018-2022

BTech , Information Technology (CGPA: 8.68)

Allahabad

- **Relevant Coursework:** Data Structures and Algorithms , Operating Systems , Computer Architecture , Distributed Systems , Probability & Statistics

Experience

Flipkart

July 2022 - Present

Software Engineer , Promise Engine

Bengaluru, India

- Led end-to-end migration of Aerospike Database Cluster from Self-Managed to PaaS Team, overseeing 80+ nodes and achieving a peak QPS of 12M+ read queries. Managed critical userpath availability data for all Flipkart products. Orchestrated project from Capacity Estimation to NFR load testing, culminating in seamless reads+writes migration with zero downtime and lag. Received Quarterly Ace Award for delivering this. [Award Certificate Link](#).
- Led end-to-end Zone Redefinition project at Flipkart Fulfillment Centers to mitigate losses from incorrect cluster fulfillment and optimize resource utilization. Expanded nationwide zones, transforming pivotal aspects of Flipkart's Supply Chain operations. Successfully resolved unforeseen challenges, achieving significant impact with a 475 bps reduction in CF losses, translating to Rs. 290 Crores in cost savings. Received Quarterly Ace Award for delivering this. [Award Certificate Link](#).
- Led the development of a tool within one of our service to compare the accuracy of Date of Delivery powered on Flipkart's Search Page vs Product Page. Led development to sample real-time production requests from these pages and move them to Elastic Search and generate meaningful dashboards. Achieved real-time Date of Delivery comparison within a 5-minute window by parallelisation of Varadhi (Flipkart Wrapper of Pub-Sub) data push time from 25 m/s to 5 m/s achieving a 80% reduction.

Flipkart

Jan 2022 – June 2022

Software Engineering Intern , Flipkart Wholesale

Bengaluru, India

- Developed Rule-Based Engine Service for comprehensive order/unit/item reconciliation across Flipkart Wholesale services and give a 360 degree view of an order. Identified and resolved system inconsistencies, enhancing operational efficiency.
- Dockerized service, created CICD pipeline using Flipkart Internal tools and onboarded the services onto K8s. Created configurations to take applications from VMs to Kubernetes increasing the uptime from 98% to 99.9%.

Flipkart

May 2021 – June 2021

Software Engineering Intern , Data Science Team

Bengaluru, India

- Worked with the Data Science Team at Flipkart Wholesale and did various studies related to Customer purchasing behaviour and worked around Customer Segmentation using different ML Models in Python. Did a customer segmenatation for the first 100,000 FK Wholesale customers and data was used for Promotions and Discounting.

Technical Skills

Databases: Aerospike, Redis, Elastic Search, MYSQL

Languages : Java , C++ , Python

Concepts: OOP in Java , Distributed Systems, Load Balancers , Geo-Replication , Distributed Caching , Linux, Virtual Machines , Redis Cache , Message Queues , Apache Kafka, Kubernetes , Docker , Multithreading , Concurrency.
